

Accelerant Solutions - New Construction Support

Accelerant has been assisting new build customers for the last decade including the South Texas Project, Barakah NPP in the UAE, and the Horizon new build project in Wales (derailed by Brexit). We are uniquely positioned to help your conventional or SMR/AR project succeed using our almost two decades of experience helping our clients perform at their most efficient and cost-effective manner.

Let our experts help you raise your company to the next level with practical and cost-effective approaches. Our three areas of products and services are:

INNOVATION

It is innovation that allows us to stay on the leading edge. Our team of experts stay on top of trends and software that help eliminate errors and reduce the time required to update and revise training materials. Our goal is to simplify content management so that your instructors can focus on what really matters: delivering effective training.

Our software knowledge includes the following:

- ❖ **SOUL™** – SOUL™ is an online knowledge management portal that will allow you to capture and disseminate knowledge throughout your organization using social collaboration. It ultimately helps make knowledge profitable by turning it into a valuable asset.

- ❖ **PLANT™** – PLANT™ is a “warehouse” that makes storing, retrieving and revising training content easier and more efficient. It simplifies the training process while keeping trainees engaged with interactive visual aids and a single, authoritative source for drawings and documents.

- ❖ **CORE™** – CORE™ is your new way to train using a blended, self-paced approach that puts the power in the hands of the student. Using elements such as artificial intelligence, videos, and gamification it can significantly reduce time spent in the classroom, helping to save money by lowering instructor time and content management overhead.

- ❖ **Vision®** – Train to become fluent in the Vision® database and how to use it to simplify training program construction and maintenance. From periodic tune-ups ensuring that your training data is working properly to offering continuing training and job aids, our Vision® experts can help sharpen the skills of even the most seasoned instructor.

COMPLIANCE

COMPLIANCE

As companies are faced with doing more with less, being able to partner with experts who can cost-effectively help you comply with regulatory standards, requirements, and procedures will be critical to your success. From nuclear to industrial standards, we have solutions to suit your needs.

❖ Maintenance Program Creation and Optimization

Our industry leading expertise in Reliability-Centered Maintenance ensures the program assessment and improvements we identify will ensure a cost-balanced approach for system and equipment performance. We offer “Turn-Key” support for every aspect of a robust, cost-focused maintenance strategy.

❖ Large-Scale Improvement Project Management

We understand the critical importance of well-executed projects to predictable performance in safety, operations, regulatory compliance, and long-term asset management. Our approach to Integrated Project Design and Delivery ensures every facet of a maintenance or capital project is understood and managed to success. Let our team help you on your next major project.

❖ Technical Documentation Projects

Let Accelerant’s team of industry leading experts develop your technical documents. Our project managers and procedure writers have experience in all phases of technical document design and development and understand operations, maintenance, and engineering.

TRAINING

TRAINING

Training should never be considered a once and done. Accelerant provides a unique blend of experts and technology to deliver complete training lifecycle support. Let us help you design, develop, implement and evaluate your training program.

❖ Initial Accreditation and Renewal

Accelerant’s team managers and site training managers can help support the data submittal required for the SAT evaluation for various programs. We don’t just provide analysis, we bring cost-efficient tactics to resolve any issues that are discovered.

❖ Turnkey Centralized Training

Accelerant provides a modern 24/7 hybrid learning approach to all nuclear power employees. We provide a blended approach using our innovative training solutions that are built for digital learners wanting a different learning path.

❖ Training Program Redesign, Optimization, and Implementation

Our training experts have all worked in the heavily regulated nuclear power industry. We understand the Systematic Approach to Training better than our competitors and can adjust our training to meet the needs of our non-nuclear customers.

By helping you with your training and compliance procedures, Accelerant Solutions can be an integral part of taking your company to the next level of performance. Contact us today to see how we can help.
